Key Messages for ECHO Show # 411 & #412 “Hepatitis B”

Finalized Script Deadline: May 30, 2008

Translation Deadline: June 6, 2008

Translators:

Translate only the words not “number 1, number 2, number 3”. Please contact Larry with any questions. Good luck!

Number 1: Hepatitis B is a disease of the liver that can be prevented and treated, but not cured.

Number 2: All adults and children should be vaccinated for hepatitis B, especially people most at risk.

Number 3: Hepatitis B can be spread in many ways such as from a mother to her baby, through sex without a condom and through shared needles for drug use or piercing.

Number 4: The majority of people infected with Hepatitis B DO NOT die from it. Get tested, and see a doctor for the best treatment plan for you, if infected.
